SUMMARY

Statistics graduate with hands-on experience in data analytics, cloud cost optimization, and AI-driven automation, currently working as a Data Analyst Contractor at Arch Capital Services. Skilled in Python, R, SQL, and Power BI, with growing expertise building self-hosted AI agent systems and automation pipelines. Passionate about turning statistical rigor into practical, scalable data science and AI engineering solutions.

EDUCATION

Cal Poly San Luis Obispo

Bachelor's Degree in Statistics

2021 - 2025

GPA - 3.1

Relevant coursework: Data Structures, Bayesian Analysis, Intro to Data Science, Applied Linear Models, Time Series Analysis, Statistical Consulting

PROFESSIONAL EXPERIENCE

Data Analyst Contractor - Entry Level

Arch Capital Services Inc. | Dec 2024 - Present

- Contributed to Eaglebot, a company-wide AI agent integrating Jira, Confluence, and ServiceNow; improved its daily-planner and web UI, driving org-wide adoption.
- Architected GitHub Copilot usage analytics pipeline (Azure, PostgreSQL, Power BI) with forecasting, giving leadership daily AI-adoption visibility.
- Built a web app generating Azure spend and rightsizing recommendations per entity via the IBM Cloudability API; presented findings monthly to business units.
- Developed a security vulnerability dashboard elevating Arch to the top 1% of insurers by BitSight score.

Data Science Intern

Arch Capital Service Inc. | Jun 2024 - Aug 2024

- Collaborated within a 4-person team to engineer an address-matching algorithm linking insurance claims to policyholders, improving accuracy.
- Applied Bayesian analysis to extracted addresses, quantifying match confidence and flagging low-confidence records for review.
- Built a gradient boosting classifier (scikit-learn) to predict insurance bind outcomes; delivered metrics to underwriting stakeholders.

Resident Advisor

Cal Poly | Aug 2022 - June 2024

- Managed residential community of 50+ students; mediated conflicts, enforced housing policy, and planned community events end-to-end.

PROJECTS

Browser Search Speed Study

Statistics 323 | April 2023 - June 2023

- Designed two-factor ANOVA experiment across 9 browser×engine combinations; automated all launches with Selenium to eliminate timing bias.
- Identified optimal browser-engine pairing and delivered statistical report with visualizations recommending fastest configuration.

Campground Search App

Self Project | Jul 2025 - Jan 2026

- Built Python Flask web app with PostgreSQL backend ingesting web-scraped USFS data, weather feeds, and reservation availability to unify fragmented government search sites.
- Delivered map-based UI with multi-filter search and live weather forecasts, offering significantly more intuitive trip planning than Recreation.gov.

Homelab AI Agent

Self Project | Feb 2026 - Present

- Operate an always-on personal AI agent via Telegram: built 5 custom skills and cron routines for nightly data syncs, next-day planning, and server maintenance.
- Replaced manual infra workflows with automation: an SSH-polling daemon that auto-restarts failed services across 3 nodes, plus a nightly 6-source data pipeline (Obsidian + Sheets to PostgreSQL) alerting via Telegram.
- Documented a 30-container self-hosted stack as a 140+ note wikilinked knowledge base, with a doc-sync skill keeping docs updated every session.

SKILLS

- Languages: Python, R, SQL, JavaScript, HTML, CSS, C++, SAS
- Tools: Power BI, Docker, GitHub, Bash, Databricks, Snowflake, Azure ML, n8n, PyTorch, MS Office
- Platforms: Linux (daily driver), Ubuntu Server, Vercel, Azure Cloud Environment
- Beginner to intermediate speaking level in Spanish
- Beginner speaking level in Hindi
- Interests: Beekeeping (10 yrs), Audiophile, Camping, Open Source Software
